Summary

Information Technology undergraduate (CGPA: 9.50) with hands-on experience building full-stack applications using Angular, Node.js, Express.js, and MongoDB. Developed end-to-end projects involving REST APIs, JWT authentication, and database integration. Strong foundation in Data Structures and Algorithms, with 170+ LeetCode problems solved, and working knowledge of Machine Learning.

Skills

Programming Languages: C++, Python, JavaScript, TypeScript
Frontend: Angular, React
Backend: Node.js, Express.js, RESTful APIs, JWT Authentication
Databases: MongoDB, MySQL
Machine Learning: NumPy, Pandas, Scikit-learn, Matplotlib, Seaborn
CS Fundamentals: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks
Tools & Platforms: Git, GitHub, Postman, VS Code, Antigravity

Education

Bharati Vidyapeeth's College of Engineering for Women, Pune 2023 – 2027
Bachelor of Engineering in Information Technology *CGPA: 9.50*

- **Relevant Coursework:** Data Structures and Algorithms, Object Oriented Programming, Database Management Systems, Computer Networks, Operating Systems

DP Mehta Junior College of Arts, Commerce and Science, Lonavala 2021 – 2023
Senior Secondary (Class XII) *Percentage: 75.00*

Achievements

- Solved **175+ Data Structures and Algorithms** problems on LeetCode. Profile
- Earned **LeetCode 50 Days** badges in **2025** and **2026**, and the **100 Days of Code** badge (2025), demonstrating consistent problem-solving practice. 2025 50 Days 100 Days Badge 2026 50 Days
- Secured **3rd rank** in the **GoDaddy Coding Competition**, a competitive programming contest.

Projects

MediVault | Live | GitHub | Angular, TypeScript, Node.js, Express.js, MongoDB

- Built a medical records platform enabling users to manage personal and family health data, with JWT-based authentication and protected API routes.
- Developed RESTful CRUD APIs supporting multi-profile family record management and file uploads up to 5MB for prescriptions and lab reports.
- Built a responsive Angular Material interface with reactive forms and client-side routing for managing medical records and patient profiles.

Interactive Learning System (ILS) | Live | Angular, TypeScript, Node.js, Express.js, MongoDB, JWT

- Developed a full-stack digital learning platform using Angular, Node.js, Express.js, and MongoDB, designed to deliver interactive tutorials tailored to different learning styles.
- Implemented JWT-based authentication and role-based access for administrators and learners, with protected routes and a backend admin seeding utility.
- Built an interactive tutorial engine supporting click, selection, and text-entry activities, with an extensible design for quizzes, matching exercises, and branching scenarios.

Text-Based Fraud Detection | Python, Pandas, Scikit-learn, TF-IDF, Logistic Regression, SVM

- Developed a text-based fraud detection pipeline using the EMCAD dataset, incorporating data cleaning, text preprocessing, and TF-IDF feature extraction with unigram and bigram features (10,000 max features).
- Implemented Logistic Regression as a baseline and evaluated an SVM classifier using Precision-Recall AUC (PR-AUC) to assess classification performance.
